

Telecom Customer Churn Analysis – Summary Report

1. Phone Service & Multiple Lines

- **90% of customers have a phone service**, while ~10% don't.
 - Among those with phone service, churn is relatively lower (~20%) compared to those without (~25%).
 - For **Multiple Lines**, customers with **no multiple lines** have lower churn (~22%), while those with multiple lines churn slightly higher (~25%).
-

2. Internet Service

- **Fiber optic users form ~35–40% of total customers**, and they show the **highest churn (~40%)**.
 - **DSL users (~34%)** churn at ~20%.
 - Customers with **no internet service (~25%)** have the lowest churn (~8–10%).
-

3. Online Security & Backup

- Customers **without Online Security** make up ~40% of the base, with **churn ~35%**.
 - Customers **with Online Security (~20%)** have churn below **15%**.
 - For **Online Backup**, churn is **~30% when backup is not subscribed**, and **~15% with backup enabled**.
-

4. Device Protection & Tech Support

- **Device Protection:** ~45% of customers don't have it, and churn is ~**32%**; those with protection churn only ~**18%**.
 - **Tech Support:** This is one of the strongest indicators—customers **with support churn ~15%**, vs. ~**35% without support**.
-

5. Streaming Services (TV & Movies)

- Having **StreamingTV or StreamingMovies** shows **moderate impact**. Customers with streaming services churn ~27%, while those without churn ~22%.
 - However, the effect is weaker compared to **security and support services**.
-

Key Insights

- **Internet type** is critical: Fiber optic customers are more prone to churn.
- **Value-added services** (Security, Tech Support, Device Protection) strongly reduce churn risk.
- **Phone service alone doesn't affect churn much**, but bundling with internet and security services helps retention.
- **Focus retention efforts** on Fiber optic users **without Online Security/Tech Support**, as they represent the highest churn segment.
